

BRIDGE RECORDING EQUIPMENT (BRE)

Official ISS Design

The *Bridge Recording Equipment* is a standalone high tech video and image surveillance unit. With a 96 hour record time this unit is specifically tailored for individuals or companies wishing monitor facilities such as storage rooms, vessels or even monitor the health and safety of personnel.

That said it is primarily an aid to providing the client with accurate and factual data of events, involving the vessel bridge and any external source, where, accurate information is essential for providing evidence to mitigate any disputed facts.

It must be mentioned that all data recorded (video or image) is admissible evidence in a court of law.

Specifications

The BRE allows the user to receive live streaming at high resolution. Keep in mind image quality depends on wifi connection speed (all cameras connect to laptop via wifi).

The effective wireless range depends on where the cameras are sighted and will remote out to approximately 15m from the laptop wireless control. Other factors like metal frame work and wiring may limit this range.

BRE pack includes:

- Waterproof casing
- Acer Laptop (preprogramed)
- 3 Data recording boxes (cameras)
- Power Leads (UK plugs)
- Full system instructions
- Spare Memory Cards
