

INTEGRATED SAFETY & SECURITY MANAGEMENT SYSTEM

The Infinite Security Solutions (ISS) Integrated Safety & Security Management Systems are designed with the consultative input of industry technical experts specific to the field the client requires. As part of our goal the software solution must be a cost effective, easy-to-use, tool to manage complex and critical information in the multi-dimensional risk and security environment.

For Management of Security Assessments, Planning, Incidents, Events, Training, Drills and Exercises and security related operational matters.

ISS Integrated Safety & Security Management System are designed to support your Organisation's Risk and Security requirements whether on Land or in a Maritime environment. They can be used for single or multi-location Organisations to interface with and help manage existing software required by a central user who needs up-to-date information on either a single or multiple-screen control point. In addition, system programmes can be loaded with your Organisation's Security Assessments, Plans and SOPs as well supporting Incidents, Events, Training, Drills & Exercises and a comprehensive range of other Safety and/or Security related operational applications. They are suitable for all types of Organisations from the Maritime industry, Port Facilities (Air & Maritime), Port Authorities, Corporations, Government Agencies or the Offshore Oil & Gas Industry. All our solutions encompass computer security (Cyber / IT Security) competence, ie the protection of computer systems from theft, damage to hardware, software or the information on them, as well as from disruption or misdirection of the services they provide.

The solutions are designed to support and manage the planning and operational needs demanded by Security Regulations facilitating maintenance of compliance with codes globally including but not limited to: the International Maritime Organisation (IMO) International Ship & Port Facility Security (ISPS) Code and accreditations such as ISO 28000: Supply Chain Security, and ISO 31000 Risk Management. Importantly, they also enables the integration of existing information sources, allowing organisations to gain a wider security perspective.

The Integrated Safety & Security Management Systems contain security related modules including Critical Areas of:

- Threat risk assessment
- Control of security plans
- Monitoring of security procedures at all levels of security
- Planning and execution of training
- Drills and exercises (and other security related events)
- Management and reporting of security incidents
- Cyber / IT Security

Reduces administrative costs

The tailored products provide for the operational needs of all critical aspects of security. The systems are accessed through easy-to-use, consistent interface, enabling the ongoing management of planning, people, incidents and events without the need for separate administrative processes.

Integrates legacy, current and new information sources

A core strengths of todays new software is its ability to integrate many streams of information from the various systems in a working facility whether a Port Facility, Corporation or Government Agency; ie Alarms, Cameras, Communications, Information, Management, Systems or Tracking (ISS definition – 7GOI). or any other stream of information that can contribute to point in time accuracy of the overall security picture can be encapsulated by this system.

Provides point-in-time security perspective

Systems are designed to enable the Management of Security Events, Personnel and Equipment across multiple locations i.e. Across a Port, around a Region or Globally. These system produce up to the minute information allowing users to know exactly who is doing what, where and when.

INTEGRATED SAFETY & SECURITY MANAGEMENT SYSTEM

Integrated Safety & Security Management System are ideal for Security Practitioners, Assessors, Consultants, Senior and Corporate Managers including Government Officials. Designed with the input of industry experts, the products are suitable for Local, State or National Government Agencies, for Consultants in ISPS, ISO 27000, 28000/1, 31000, COBIT, ITIL or other industry best practices.

The solutions are designed to store organisational information related to security in a dynamic inter-connected matrix. The matrix follows the Plan, Do, Check and Act (PDCA) model allowing users to navigate in multiple dimensions without duplicating data entry. It enables the complex inter-relationships within your organisation to be clearly viewed.

The **Integrated Safety & Security Management System** provides the tools to accurately model, manage, track and act on security matters.

MAPS

<i>Authoritative Documents</i>	A	<i>Organisational - Operational</i>
<i>Threat Risk Assessments</i>	G	<i>Status People (Staff & Contractors)</i>
<i>Mitigation Strategies</i>	A	<i>Service Providers</i>
<i>Operating Procedures</i>	I	<i>Equipment (Security & Safety)</i>
<i>Contingency Planning</i>	N	<i>Communications Channels</i>
<i>Duties & Qualifications</i>	S	<i>Internal and External Resources</i>
<i>Record Keeping Requirements</i>	T	<i>Continuous Improvement Cycle</i>

ACROSS

Multiple Departments, Divisions, Organisations and/or Locations

An Authorised User can readily view all of the following:

- All locations being assessed against a particular scenario
- Any locations with critical vulnerability or catastrophic consequence ratings
- Location overviews showing procedures, schedules and personnel
- Mapping of procedures to relevant part/s of one or more Authoritative Document/s (e.g. ISPS, ISO 27000, 28000, 31000, ISM)
- Planned Maintenance Scheduling
- Planning for Training/Drills/Exercises and recording of participants/results
- Distribution Management for Information Circulars and related procedural updates

The **Systems** clarify the inter-dependence of all aspects of the security picture, highlighting the relationship between Threat Risk Assessments and Operational matters. The modules cover the critical areas of:

- Threat risk assessments
- Production of security plans
- Monitoring of procedures at all levels of security
- Planning and execution of training, drills and exercises
- Feedback and adjustment to threat risk assessments, mitigation strategies and procedures
- Mapping against day to day operations
- Management and reporting of security incidents and events
- Cyber / IT Security Alerts

Implements Continual Improvement Cycle of Plan, Do, Check and Act (PDCA).
