

# TRACKING AND MONITORING SERVICES

ISS, through our technical equipment provider offers a [Mobile Satellite Service \(MSS\) with Pole-to-Pole coverage over the entire globe including the Poles](#), enabling clients to deploy their personnel & equipment anywhere in the world. The constellation of Low-Earth Orbiting (LEO), cross-linked satellites provides critical voice and data services for areas not served by terrestrial communication networks. Our client base represent a broad spectrum of industry, including, but not limited to; Maritime, Aeronautical, Government (Defence, Public Safety), Utilities, Oil & Gas, Mining, Forestry, Heavy Equipment and Transportation.

Monitored from our HQ in Singapore the trackers can be overt or covert, and divided into two types; Personal or Vehicle.

## Personal Device Overview

The ISS tracker is a pocket - sized, ruggedized global personal GPS tracking device that utilises the Iridium satellite network as its communications bearer in addition to a GSM bearer allowing users to send location reports,

two-way canned and free-text messages and emergency notifications. It is designed with ultra-low power consumption drawing less than 35mA during sleep and can send over 1600 reports on a single charge in perfect conditions.

Although new to market, the device lineage is well proven operationally and provides a cost-effective web-based method of enhancing the safety, security and productivity of personnel and equipment located in remote parts of the world. It enables location, safety and operational status monitoring of personnel and mobile assets in real time, anywhere, and was borne out of military personnel tracking in areas without conventional infrastructure across the world.

## Vehicle Device Overview

Our Vehicle unit is a small, ruggedized global vehicle GPS tracking device that utilises the Iridium satellite network as its communications bearer in addition to a GSM bearer allowing for the most cost - effective airtime selection wherever you are on the globe. Although new to market, the device lineage is well proven operationally and provides a cost-effective, web-based method of enhancing the safety, security and productivity of personnel and equipment located in remote parts of the world
